

ENTERPRISE PDF MANAGEMENT PLATFORM · FIELD GUIDE

Your documents never leave the building.

A bank's loan file, a hospital's lab report, a court's ruling. None of them should have to cross an ocean to be converted to Word. YesPDF finishes the entire PDF job in one place: on your own server.

100% ON-PREMISE
AIR-GAP READY · NO CLOUD

Where does your PDF tool take your documents?

Most answers on the market lead to the same door: the cloud. Free conversion sites, subscription desktop suites, browser add-ons; they take your contract, your balance sheet, your patient record to their servers first, then do the work. For a data protection officer that is not a question mark, it is a line item of risk.

YesPDF builds the equation the other way around. The platform runs in your data center; the user just opens a browser. No registration, no activation, and it works with the internet cable unplugged. A document never crosses your network boundary, not once.

20+

professional PDF tools
on one platform

200+

concurrent users on a
single server

6

OCR languages, Turkish
included

100%

on-premise; even air-
gapped

Deployment in one sentence: one server, one browser

The most expensive line of classic enterprise software is not the license, it is the rollout: an install on every machine, an update on every release, an activation for every user. Because YesPDF is browser-based, that entire line disappears. Windows, Mac, Linux, tablets; any device with a browser is a client. IT manages one server, the rest is a URL.

FIELD NOTE

The moment that surprises people most: in an isolated test environment with the internet fully cut, the platform simply keeps working. There is no screen looking for a license server, because it talks to no one outside.

Twenty-plus tools, four headings

Conversion

Convert to Word · OCR-backed, editable DOCX

Convert to Excel · extracts tables to XLSX

Convert to HTML and images · JPEG, PNG, TIFF

Searchable PDF · OCR on scans, 6 languages

Document translation · DeepL integration, 30+ languages

Editing

Advanced PDF editor · text, images, shapes, annotations

Smart editing · region-based text on scanned docs

Merge, split, compress · without quality loss

Watermark and stamp · text, image or QR code

Signing and privacy

e-Signature and mobile signature · legally valid in Türkiye

Certificate signing · X.509, bulk signing

Fill and sign forms

Redaction · removes data from the file, not just the view

Administration

Central panel · users, roles, groups, documents

LDAP / Active Directory · native integration

Job queue and usage stats

Per-tool on/off · users see only what they may use

The screenshot displays the 'PDF Araçları' (PDF Tools) section of the YesPDF application. The header includes the YesPDF logo and navigation links: 'Apk', 'Belgelerim', 'PDF Araçları', 'Profil', and 'Çıkış'. The main content area is titled 'PDF Araçları' and contains six tool cards arranged in a 2x3 grid. Each card has a title, a brief description, a 'Belge seçin...' button, and a green action button. The tools are: 'Word'e Dönüştür' (Convert to Word), 'Excel'e Dönüştür' (Convert to Excel), 'Aranabilir PDF Yap' (Make PDF Searchable), 'PDF Böl' (Split PDF), 'PDF Sıkıştır' (Compress PDF), and 'Sayfa Çıkar' (Extract Pages).

EXHIBIT 1 · Tool home screen; users see only the tools they are entitled to.

An answer for every question an auditor will ask

AES-256, a key per file

Documents rest encrypted on the server; every file has its own key. Certificate-based encryption is supported.

Audit trail

Who did what, when, on which document; full traceability that feeds straight into audit reports.

OWASP Top 10 protection

Ships with countermeasures against the known web vulnerability classes, XSS, CSRF and SQL injection first among them.

Virus scanning

Every uploaded file passes an automatic scan; if malicious content is found, the operation stops.

IP restriction and rate limiting

Only authorized IPs reach the admin panel; unauthorized attempts are blocked and reported.

Password and permission layers

Document-open and permission passwords, role-based access, granular permission control.

Air-gap: no internet, full function

The platform runs complete in air-gapped environments. For organizations handling classified work, a dedicated NATO STANAG compliance report is available on request.

Compliance frame: KVKK (Türkiye) · GDPR · ISO/IEC 27001 · banking audit requirements (BDDK)

Side by side with the alternatives

The full comparison document runs 15 pages; these are the rows that decide a purchase. Source: YesPDF Competitor Comparison, 2026.

	YESPDF	ABBYY FINEREADER 16	ADOBE ACROBAT PRO
Deployment	Web-based, on-premise	Desktop application	Desktop + cloud
Per-user install	None; a browser is enough	On every machine	On every machine
Data sovereignty	100% on-premise	Local files	Cloud-dependent
Online registration	Not required	Activation required	Cloud account required
Isolated network (air-gap)	Yes	Yes (desktop)	No
Central management	Built-in panel	None	Separate Admin Console
LDAP / AD	Native integration	Not available	Via Console
Any operating system	Yes; via browser	No	No
License model	Server-based, predictable	Per-seat license	Per-seat subscription

COST NOTE

With per-seat subscriptions the invoice grows with headcount. With server-based licensing, 200 users run off the same box; that is where the scenarios come from in which organizations report **savings above 90 percent** against an Adobe subscription.

One platform, four different auditors

Every sector carries different documents and answers to a different auditor. Per-tool entitlement lets each organization draw its own map: the law firm switches on redaction, the bank bulk signing, the hospital OCR.

BANKING & FINANCE

The loan file never goes outside

Regulator-compliant document handling (BDDK), traceability fit for AML processes, bulk e-signature on loan contracts, full audit trail.

PUBLIC SECTOR

Classified correspondence

Classified document handling for citizen data and official correspondence; e-Government integration; isolated network support.

HEALTHCARE

Patient records stay in the hospital

OCR archiving of labs and reports, redaction for patient privacy, retention and deletion processes aligned with data protection law.

LEGAL

Case files, witness names, bank slips

Redaction removes sensitive data from the file permanently; bundles are merged, paginated, and one PDF goes to court.

OCR that actually reads Turkish

Making a scanned Turkish contract searchable is where most foreign tools lose their ğ's and ı's. YesPDF's OCR layer works in six languages including Turkish and English, preserves the original image quality and runs in batches. On top of it, DeepL integration translates documents into 30+ languages; for an exporting SME's contract traffic, that alone justifies the license.

In the IT manager's own vocabulary

Identity

Native LDAP and Active Directory integration; your existing users and groups work as they are. Role-based entitlement lives in the panel.

Operations

Job queue monitoring, usage statistics, storage settings, backup and restore, gathered in one panel.

Scale

A single server carries 200+ concurrent users; growth is solved by adding server resources, not by renegotiating licenses.

Integration

With documented APIs, document operations plug into your own workflows; tools can be switched on and off one by one.

You set the update calendar

In cloud software, updates come to you; the interface changes mid-work, a feature retires. In the on-premise model your IT team picks the date, tries the release in a test environment first, then rolls it out. For organizations that face compliance audits, this is not a comfort, it is a requirement.

THE POC REALITY

The proof-of-concept install is free and happens on your own infrastructure. Before buying, you test with your own documents, on your own network, under your own auditor's eyes.

Who builds this?

Yes Bilişim is an enterprise software house founded in Istanbul in 2011. We are Türkiye's main distributor in print management; we carried PaperCut, MyQ, Gespage and Cartadis into hundreds of organizations. Document security is not a new market for us, it is a craft we have worked for fifteen years. YesPDF is the product of that craft; our trilingual AI news platform GlobalFeed.ai is the showcase of the same software muscle.

See it on your own server

Do not look at a slide, look at your own document. Three steps:

1 · Demo

Walk the platform end to end in an online session.

2 · POC

We set up a free trial install on your infrastructure.

3 · Quote

Get enterprise pricing sized to your user count.
